

Adding a Printer to the New World ERP Application Server

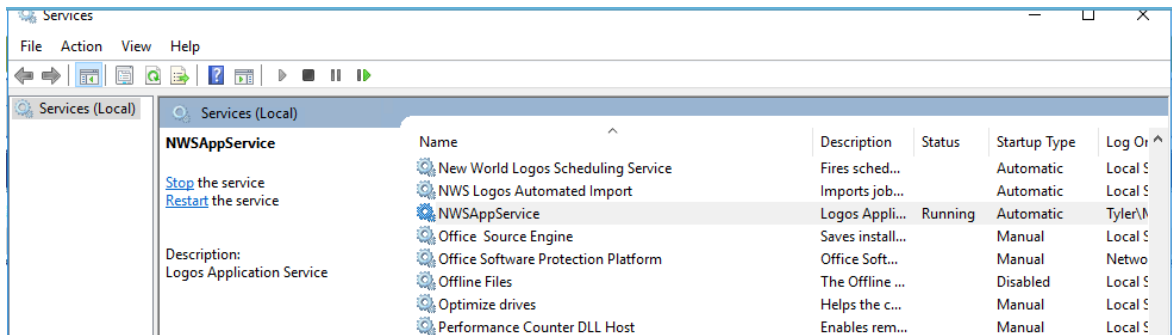

New World ERP – Technical Documentation

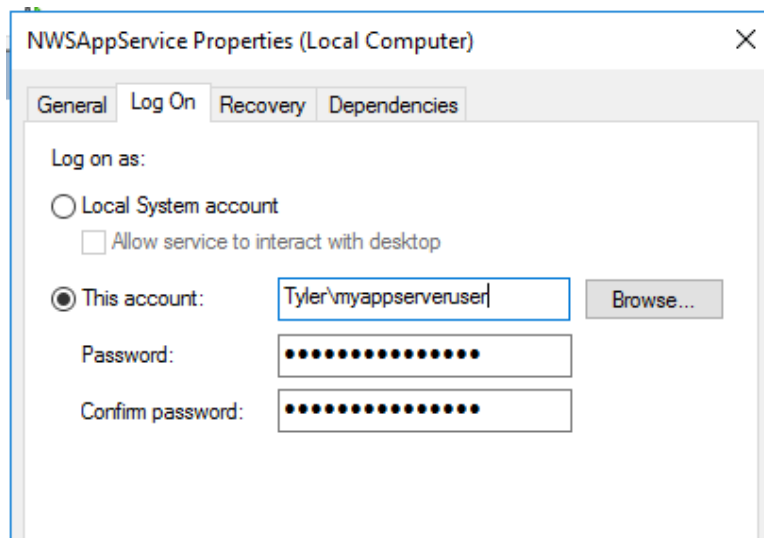

ADDING A PRINTER TO THE APPLICATION SERVER

Echo form printing (Checks, Purchase Orders) is all done from the Application Server. The printers are pulled when the NWSAppService (Control Panel > Administrative Tools > Services) is started. This pull also happens when you start the Logos Management Console using the start button. The following steps show you how to add a printer to the Application Server and to the Echo Forms as an available printer.

1. Navigate to Start > Control Panel > Administrative Tools > Services on the Application Server.
2. Locate NWSAppService. Right click on it and choose **Properties**:

3. On the **Log On** tab you should see a user. This user is running the Logos Service on the Application Server and needs full security to the printers installed on the App Server:

4. After giving security access to the printers in Control Panel > Printers to the user running the NWSAppService, stop and start the Logos Management Console. These printers will not show up in new world ERP until this has occurred.
5. After starting the Management Console, go back into New World ERP and navigate to Maintenance > New World ERP Suite > System > Form Layout.
6. Click on a *Form*. For this example, we will click on **AP Check**:

Form Type	Echo	SSRS	Tyler	Format	Renderer	File Name	Standard
Checks (2)	✓	✗	✓	AP Check	Echo	APCheck_Standard	
EFT Stubs (2)	✓	✗	✓	PR Check	Echo	BowlingGreen_PayrollCheck	
End Of Year Forms (4)	✓	✗	✗				
Inventory Issue (1)	✗	✓	✓				

The following page displays:

- Click on the **Print Options** button.
- Click the Available Printers tab.
- The printers assigned to the form will show on the right side of the jump box. Available printers will show on the left side of the jump box:
